MONTHLY PERFORMANCE REPORT

Northwind Supply Co.

September 2026 · compared with August 2026

RETURN ON AD SPEND

2.77x

against a breakeven of 1.88x

AD SPEND	REVENUE	PURCHASES	AVERAGE ORDER
136,131 EGP	377,180 EGP	570	662 EGP

Every number in this report traces back to a daily row pulled directly from Meta's and TikTok's own reporting APIs. There is no manual entry step, and nothing is estimated.

September 2026

THE ONLY NUMBER THAT MATTERS

Breakeven ROAS for this business is 1.88x — calculated from the client's own cost structure (53.1% contribution margin), not from an industry average. This month the account returned 2.77x, which is 47% above breakeven.

PAGE TWO

Performance at a glance

Combined results against last period

	META	TIKTOK	COMBINED	LAST MONTH
Ad spend	93,855	42,275	136,131	153,460
Purchases	377	193	570	715
Cost per purchase	249	219	239	215
Revenue	**258,908**	**118,272**	**377,180**	**476,206**
ROAS	2.76x	2.80x	2.77x	3.10x
Average order	687	613	662	666

ROAS of 2.77x against a breakeven of 1.88x — 47% above breakeven.

Where the budget went

CHANNEL	SPEND	ROAS	SHARE OF BUDGET	
Meta	93,855 EGP	2.76x		69%
TikTok	42,275 EGP	2.80x		31%

Efficiency

CPM	**65 EGP**	cost of 1,000 impressions
Click-through rate	**1.44%**	how well the creative earns a click
Frequency	**2.13**	average times each person saw you
Click-to-purchase	**1.88%**	how well the site converted paid clicks
Revenue per 1,000 impressions	**180 EGP**	end-to-end media efficiency

PAGE THREE

The funnel, step by step

Where people drop out between seeing an ad and buying something. The weakest step is the one to fix first — everything upstream of it is being wasted.

Step	Volume	Conversion from the step above		
Impressions	2,095,701	seen by 2,095,701		
Link clicks	30,255		1.4%	of impressions
Add to cart	1,745		5.8%	of clicks
Checkout started	782		44.8%	of carts
Purchases	570		72.9%	of checkouts

Weakest step this month: add to cart at 5.8% (1,745 of 30,255). A 20% relative lift at that one step, at the same spend, would put roughly 114 more orders through the same funnel — about 75,436 EGP of additional revenue. That is the argument for fixing the page before raising the budget.

Platform detail

	META	TIKTOK	COMBINED
Spend	93,855	42,275	136,131
Impressions	1,242,419	853,282	2,095,701
CTR	1.59%	1.23%	1.44%
CPM	76	50	65
Frequency	2.31	1.92	2.13
Purchases	377	193	570
Cost/purchase	249	219	239
Revenue	**258,908**	**118,272**	**377,180**
ROAS	**2.76x**	**2.80x**	**2.77x**
Average order	687	613	662

Reach is shown as a sum of daily reach, which overstates unique people — platforms deduplicate within a day, not across a month. Read it as a trend, not a headcount.

PAGE FIVE

What we did, and what happens next

What we changed this month

[Three specific things you did. "Launched four UGC concepts and cut the two weakest ad sets" — not "optimised creative" and not "tested some things".]

What we learned

[One insight the data proved this month. This is the part the client is actually paying for.]

What we are doing next month

[Two or three concrete moves, each tied to a number in this report. Name the number.]

What the numbers don't show

[Stockouts, shipping delays, a price change, a competitor entering. Say it before the client finds it.]

What we need from you

[One clear ask. New imagery, a price decision, a stock fix. Give them a job and they become a partner.]

What the numbers mean

ROAS	Revenue divided by ad spend. A 3.0x return means each unit spent brought back 3.
Breakeven ROAS	The point where ads pay for themselves exactly, after product cost, shipping, fees and returns. Below it, every sale loses money.
Cost per purchase	Ad spend divided by orders. Only meaningful next to average order value and breakeven.
Attribution window	How long after a click the platform still credits itself with a sale. Kept fixed month to month so comparisons stay honest.
Revenue	Orders the platforms reported, not your bank statement. We reconcile the two each quarter.
