Automated ads *reporting system*

A multi-workflow reporting operation connecting advertising platforms, data layers, brand sheets, and recurring reports.

CASE STUDY / RUUD

N8N · META ADS · TIKTOK ADS · GOOGLE SHEETS

THE FRICTION

Reporting data lived in different places, at different levels of detail.

Account-level data, ad-level performance, creative rollups, and reporting periods all needed to become useful views for each brand.

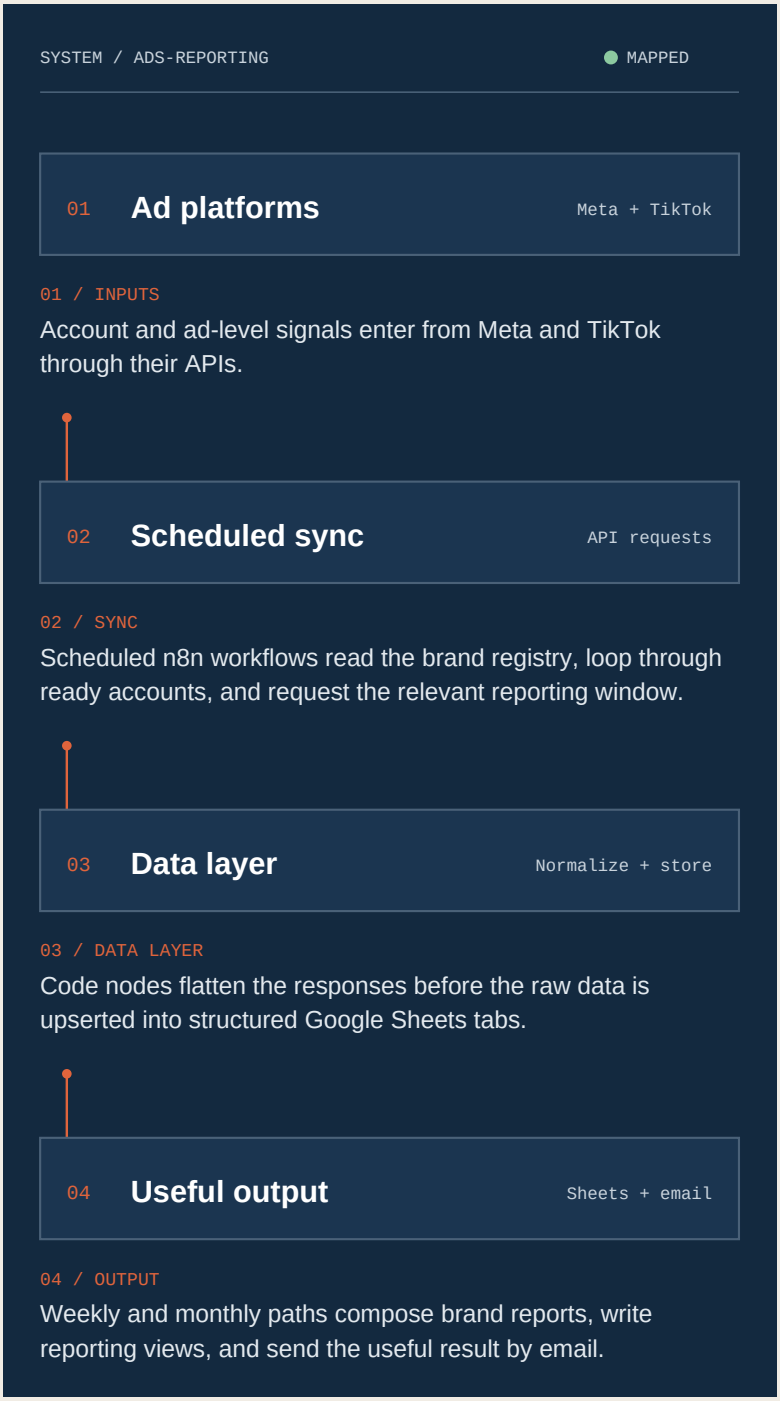
THE QUESTION

Could the repetitive operating layer run itself?

Not just fetching numbers, but discovering brands, preparing their sheets, handling failures, and delivering a report people could use.

A NOTE FROM THE BUILD

> **Good automation is not only about the happy path. It also needs a place for new accounts, missing resources, and the moments when an API says no.**



THE BUILD

A set of n8n workflows for brand discovery, daily synchronization, sheet provisioning, and weekly or monthly report generation.

THE DETAILS

Schedules, loops, code nodes, Google Sheets, Google Drive, error checks, email alerts, and separate account-level and ad-level paths.

THE LESSON

Automation becomes more valuable when it accounts for the work around the workflow.
